

EQUAL BUDGET: every arm, learned and classical, is fitted / trained on the SAME $N_{\text{train}} = 1.6\text{e}5$ channel set (10_SPEC_stageC A3). $n = 2560$ trials per SNR point. GMM b^* = kron $K=512$, chosen by validation log-likelihood over the full $N_r=8$ grid.

checkpoint ckpt/d2sx_N160000_a1.pt: gates are measurable on D1 only, so this D2 checkpoint is qualified through its D1 sibling sx_N160000_D1.pt, which PASSES GB 2.66e-3 / GC 0.0999 / GD 0.0718 (LADDER_C.md:1).

At this budget C2's GMM improves to 0.2434 on the extended $K=1024$ grid (results/tables_D2_B16e4k.txt); V1 is 0.1449 there. See F15.
