

EQUAL BUDGET: every arm, learned and classical, is fitted / trained on the SAME $N_{\text{train}} = 1e4$ channel set (10_SPEC_stageC A3). $n = 2560$ trials per SNR point.

checkpoint ckpt/d2sx_N10000_a1.pt: the table records NO GATE RECORD for it on D2 (GA-GD are measurable on D1 only); its D1 sibling at $N_{\text{train}}=1e4$ FAILS GC 0.243 vs 0.15.

§6d registers these points as a budget-axis measurement, not an arm result; the gate-passing model's BLER is in results/tables_D2_C.txt.
