

NOT an equal-budget comparison: the learned arms V0/V1/V4 train on $N'=1.6e5$ channels (ckpt/d2sx_N160000_a1.pt, no gate record), the GMM arms fit $N=1e4$. The learned-vs-GMM contrast is therefore SECONDARY; the primary contrast is the WIRING, V0 vs V1/V4 at the same checkpoint and budget. The pre-registered arm M-ours-dscore stays BLOCKED in the pre-registered table. BLER exactly 0 is drawn at the $0.5/n$ floor = $1.95e-4$.
